

IP Lists

Creating IP Lists

To create an IP address list for targeting go to the IP Lists tab of the Targeting page and then click "+IP List".

After entering the name and description of the IP list you can add IP's in two ways: enter them in the text box or upload a CSV file. Ranges of IP addresses could be added by using a / so a range from 158.106.194.99 - 158.106.194.123 could be added like 158.106.194.99/123. You have the option to append IP addresses to an already created list, replace the entire list that is already there, or remove selections from a list.

The screenshot displays the IP List management interface with three main sections: Basic Settings, Edit IP(s), and Included IP(s).

- Basic Settings:** Includes fields for Name (lacroix), Status (Active/Inactive), and Description (pampelmouse).
- Edit IP(s):** Features an Action menu with options: Append To List, Replace List, and Remove From List. A Manual text area is provided for entering multiple IP lists, with a note: "Enter multiple ip_lists comma or newline separated". Below this is a CSV File upload section with a "Choose File" button and "No file chosen" text.
- Included IP(s):** Shows a list of 63 IP addresses. The visible portion includes: 158.106.194.162, 158.106.194.163, 158.106.194.164, 158.106.194.165, 158.106.194.166, 158.106.194.167, and 158.106.194.168. Each IP has a delete icon (X). At the bottom of this section are "Remove All" and "Download Current List" buttons.

Applying an IP List

You can apply your IP lists in the targeting tab of a supply tag, demand tag, or campaign. You can apply an unlimited amount of lists to a single tag. Note: You could do a combination of white list and blacklist with app lists, bundle lists, and Device ID lists. When doing that you narrow your target to what is true in all of the targeting lists.

Downloading, Editing, and Deleting IP Lists

Once you have created your IP lists they will appear in your IP lists page under targeting. By using the icons in the far right column, you could download, edit and delete IP Lists. You could also Edit a list by clicking on its name.

When editing an existing IP list, you can remove all IP's or download the current list. You also have the option to enter a list of comma or newline separated IP's to append to, replace, or remove from the IP list. These actions can also be done with an uploaded CSV file.
